

NoteMage Import Test Document

A single-file fixture exercising every common PDF element. Each block is labeled with its type so you can verify the importer one element at a time.

table of contents:

- 1. Text & inline formatting
 - 2. Headers & titles
 - 3. Code blocks (Python, TypeScript, SQL, Bash)
 - 4. Callouts (info, tip, warning, danger, note)
 - 5. Lists (bullet, numbered, nested, task)
 - 6. Blockquote
 - 7. Table
 - 8. Images & captions
 - 9. Math, sub/superscript
 - 10. Links, divider, footnote, definition list
-

1. Text & inline formatting

paragraph:

This is a normal body paragraph with justified alignment. NoteMage is an AI-powered study platform that turns uploaded material into structured notes and practice questions. This sentence exists purely to give the parser a realistic block of running prose to handle.

inline formatting (bold, italic, underline, strikethrough, highlight, inline code):

Text can be **bold**, *italic*, ***bold-italic***, underlined, ~~struck through~~, **highlighted**, and contain `inline_code()` spans.

2. Headers & titles

heading level 1:

Heading 1 — Section

heading level 2:

Heading 2 — Subsection

heading level 3:

Heading 3 — Sub-subsection

3. Code blocks

codeblock (python):

python

```
from functools import lru_cache

@lru_cache(maxsize=None)
def fib(n: int) -> int:
    """Return the n-th Fibonacci number."""
    if n < 2:
        return n
    return fib(n - 1) + fib(n - 2)

print([fib(i) for i in range(10)]) # 0 1 1 2 3 5 8 13 21 34
```

codeblock (typescript):

typescript

```
type Note = { id: string; title: string; tags: string[] };

function group<T extends { tags: string[] }>(items: T[]): Map<string, T[]> {
    const out = new Map<string, T[]>();
    for (const it of items) {
        for (const tag of it.tags) {
            const bucket = out.get(tag) ?? [];
            bucket.push(it);
            out.set(tag, bucket);
        }
    }
    return out;
}
```

codeblock (sql):

sql

```
SELECT s.subject, COUNT(*) AS notes, AVG(q.score) AS avg_score
FROM notes AS n
JOIN subjects AS s ON s.id = n.subject_id
LEFT JOIN quizzes AS q ON q.note_id = n.id
WHERE n.created_at >= NOW() - INTERVAL '30 days'
GROUP BY s.subject
HAVING COUNT(*) > 3
ORDER BY avg_score DESC;
```

codeblock (bash):

bash

```
#!/usr/bin/env bash
set -euo pipefail
for f in ./uploads/*.pdf; do
    echo "Importing ${f} ..." && notemage import "$f" --tag exam
done
```

4. Callouts / admonitions

callout (info):

Info

Imports run asynchronously. Large PDFs are processed in the background and notes appear as soon as each page is parsed.

callout (tip):

Tip

Tag your upload during import (e.g. **#exam**) so generated notes are filed into the right deck automatically.

callout (warning):

Warning

Scanned PDFs without a text layer require OCR first — extraction quality depends on scan resolution.

callout (danger):

Danger

Re-importing the same file overwrites existing notes for that source. This action cannot be undone.

callout (note):

Note

This whole document is a test fixture. None of the content describes a real billing change or policy.

5. Lists

bulleted list:

- Headings and paragraphs
- Code and inline formatting
- Tables and images

numbered list:

- 1 Upload a PDF
- 2 The parser extracts blocks
- 3 Notes and quizzes are generated

nested list:

- Frontend
- Backend stack:
 - PostgreSQL
 - Next.js
 - TypeScript
- Deployment

task list (checkboxes):

- ☒ Parse text layer
- ☒ Detect code blocks
- ☐ Reconstruct tables
- ☐ Map callouts to note styles

6. Blockquote

blockquote:

“Tell me and I forget, teach me and I may remember, involve me and I learn.”
— attributed to Xenophon

7. Table

table:

Subject	Topic	Status	Score
Math	Quadratic functions	Done	92%
Informatik	DOM & XSS	In progress	78%
French	DELFI B1 oral	Done	85%
History	Ottoman expansion	Not started	—

8. Images & captions

image (raster chart) with caption:

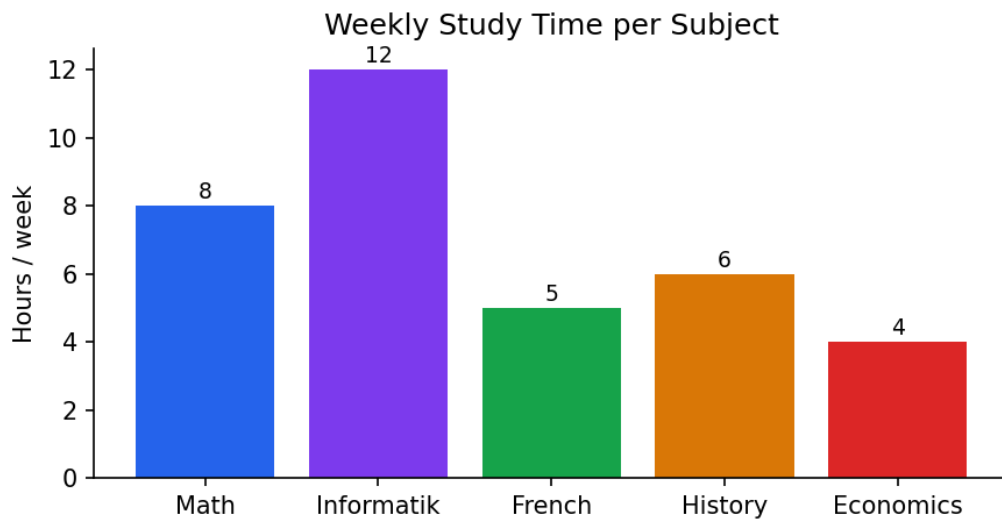

Figure 1 — Weekly study time per subject (bar chart).

image (diagram / banner) with caption:

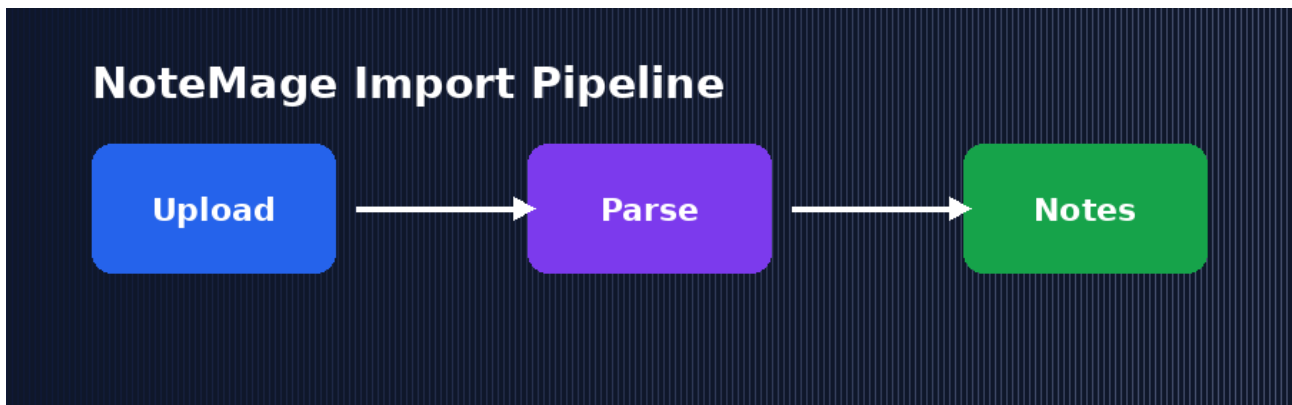

Figure 2 — Upload → Parse → Notes pipeline (vector-style graphic).

9. Math, subscript & superscript

equation (rendered as image):

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Figure 3 — The quadratic formula.

subscript / superscript (text):

Chemical formula: H_2O and CO_2 . Exponents: $E = mc^2$, and $a^2 + b^2 = c^2$. Indexed variable: x_i for $i = 1 \dots n$.

10. Links, divider, footnote, definition list

hyperlink:

Visit the project at notemage.app or the repo on [GitHub](https://github.com).

horizontal rule / divider:

footnote reference:

The importer was benchmarked on a 40-page document¹ and handled it without manual cleanup.

¹ Synthetic benchmark; numbers are illustrative only.

definition list:

Note

An atomic unit of study material extracted from a source.

Deck

A collection of notes grouped by subject or tag.

Quiz

Auto-generated practice questions derived from notes.

End of fixture — if every labeled block above survived the import, you're good. ✓
